These questions are provided by the ABPMR for study purposes only.
They are intended as a study tool for the Part I Certification Examination.

These are actual ABPMR Part I Certification Examination questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations.

With the exception of these questions, the ABPMR does not share board exam questions with anyone.
1. A patient presents with joint pain and swelling with symmetric involvement of the ankles, heels, spine, and sacroiliac joints with calcaneal spurs and periosteal proliferation near the involved joints. This is characteristic of the arthropathy associated with

   A. psoriatic arthritis
   B. reactive arthritis (Reiter disease)
   C. chondrocalcinosis
   D. Behçet syndrome

2. Three weeks after a severe traumatic brain injury (TBI) with basilar skull fracture, a 23-year-old patient in a rehabilitation unit develops new onset ocular pain, unilateral proptosis, and unilateral orbital vascular congestion. What is the most likely diagnosis?

   A. Detached retina
   B. Acute narrow angle glaucoma
   C. Carotid cavernous fistula
   D. Retrobulbar hematoma

3. In a person with a transfemoral amputation, an abnormal prosthetic gait with lateral trunk bending toward the involved side in midstance most commonly occurs with hip

   A. adductor weakness
   B. extension contracture
   C. flexion contracture
   D. abductor weakness

4. Which modality should precede shoulder stretching in a patient with adhesive capsulitis?

   A. Massage
   B. Ice packs
   C. Electrical stimulation
   D. Ultrasound
5. A 22-year-old patient with mild suprascapular pain and radiation into the ipsilateral upper extremity is examined with a monopolar needle electrode at minimal voluntary contraction. In the biceps brachii, the second motor unit to fire is observed when the first noted motor unit fires at 10 Hz. These findings are most consistent with

A. polymyositis  
B. no abnormality  
C. brachial plexopathy  
D. C6 radiculopathy

6. A 36-year-old manual laborer sustained a surgically visualized complete laceration of the median nerve at the wrist. However, he continues to have grade 3 strength of thumb abduction. Needle electromyography of the opponens pollicis shows abundant fibrillation potentials and reduced numbers of normal-appearing voluntary motor units. The most likely explanation of these findings is anomalous innervation of the median nerve innervated muscles via

A. a median to ulnar nerve forearm communication (Martin-Gruber anastomosis)  
B. an ulnar to median nerve forearm communication  
C. a radial to ulnar nerve hand communication (Froment-Rauber anastomosis)  
D. an ulnar to median nerve hand communication (Riche-Cannieu anastomosis)

7. Concentric activation of the iliopsoas muscle is essential to which phase of the gait cycle?

A. Midstance  
B. Terminal stance  
C. Preswing  
D. Terminal swing

8. What is the preferred imaging technique to rule out Osgood-Schlatter disease?

A. Conventional radiography  
B. Arthrography  
C. Ultrasonography  
D. Magnetic resonance imaging

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
9. Considering safety and comfort, what is the preferred location for needle electrode insertion when studying the diaphragm?

A. The fourth or fifth interspace, at the anterior axillary line
B. The fourth or fifth interspace, at the posterior axillary line
C. The eighth or ninth interspace, at the anterior axillary line
D. Overlying the subscapularis, directed tangential to the skin

10. What is the most common cause of diskitis?

A. Pseudomonas
B. Mycobacterium
C. Streptococcus
D. Staphylococcus

11. A 70-year-old woman presents with symmetrical stiffness, tenderness, and pain over both shoulders and proximal thighs. The symptoms have persisted for the past 10 weeks. The sedimentation rate is 110. The best therapeutic approach is to prescribe

A. steroids
B. colchicine
C. methotrexate
D. nonsteroidal anti-inflammatory drugs

12. A 76-year-old woman is referred for rehabilitation following a recent left total hip arthroplasty. To prevent hip dislocation, you instruct the patient to avoid hip

A. adduction beyond neutral
B. abduction greater than 20 degrees
C. flexion greater than 45 degrees
D. external rotation beyond neutral

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
13. Which risk factor is most clearly implicated in the development of degenerative lumbar diskogenic disease?

A. Hyperlordosis
B. Smoking
C. Body build
D. Posture

14. The treatment program for a 43-year-old patient during the first week following an impacted humeral neck fracture should include

A. immobilization
B. active assisted range of motion
C. active range of motion
D. surgery

15. A 43-year-old runner presents with right-sided hip pain. On examination, you note tenderness to palpation over the greater trochanter on the affected side. No focal neurologic deficits are noted and no other areas of tenderness are elicited. A key part of your treatment plan should include strengthening of the hip

A. internal rotators
B. extensors
C. abductors
D. adductors

16. Which cardiorespiratory outcome would you expect from an elderly person participating in an aerobic program?

A. A decrease in VO$_2$ max but an increase in walking speed
B. No change in tolerance during activities of daily living
C. Improvement in VO$_2$ max
D. No change in stroke volume and a reduction in systemic vascular resistance

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
17. A patient complains of pain inferior to the anteromedial surface of the knee, especially while climbing stairs. On examination, there is tenderness to palpation over the proximal anteromedial tibia. What is the most likely diagnosis?

A. Pes anserinus bursitis  
B. Iliotibial band syndrome  
C. Patellar tendinitis  
D. Prepatellar bursitis

18. Typical radiologic findings in osteoarthritis involving the knee are

A. symmetrical joint space narrowing  
B. meniscal calcification  
C. trabecular sclerosis  
D. subchondral cysts

19. When treating a patient with a traumatic brain injury (TBI) for detrusor hyperreflexia using anticholinergic agents, what is a possible adverse effect?

A. Bradycardia  
B. Diarrhea  
C. Worsening of delirium  
D. Pupillary constriction with blurred vision

20. A 50-year-old retired army paratrooper with diabetes complains of pain on ambulation due to degenerative joint disease in his right hip. You prescribe a single cane to

A. decrease weight-bearing forces across the arthritic hip joint  
B. help in sensory feedback or environmental scanning  
C. compensate for gluteus medius weakness  
D. increase the base of support, thus increasing stability and balance

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
21. What is the most common mechanism for Achilles tendon rupture?
   A. Eccentric dorsiflexion
   B. Eccentric plantar flexion
   C. Passive dorsiflexion
   D. Passive plantar flexion

22. Which factor differentiates myotonic discharge from complex repetitive discharges (CRDs)?
   A. Amplitude and frequency of potentials
   B. Duration of the potentials
   C. Complexity of waveforms in CRDs
   D. Resemblance of myotonic discharge to triphasic motor unit response

23. What is the most frequent cause of stroke?
   A. Intracranial hemorrhage
   B. Large vessel thrombosis
   C. Cerebral embolism
   D. Vasculitis

24. The pattern of responses depicted here is recorded after 50 Hz stimulation of the median nerve of an infant. Which diagnosis is most likely?
   A. Spinal muscular atrophy
   B. Botulism
   C. Inflammatory myopathy
   D. Human immunodeficiency virus infection

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
25. A 42-year-old receptionist has a two-year history of severe radial wrist pain, which is worse with pinching activities and wrist ulnar deviation. Job modification, extensive physical therapy, and multiple cortisone shots have failed to provide much relief. What is the best recommendation?

A. Wrist arthrodesis  
B. Referral to a pain program  
C. Wrist tendon lengthening surgery  
D. Surgical decompression of the first extensor compartment

26. During nerve conduction studies (NCSs), what is defined as the maximal stimulus?

A. The highest intensity of stimulus that the patient can tolerate  
B. Stimulus beyond which there is no further increase in the evoked amplitude  
C. Stimulus about 20-30% greater than the threshold stimulation  
D. Any stimulus which is greater than the threshold stimulus

27. When poor initiation is noted during rehabilitation of a patient with a traumatic brain injury (TBI), which region of the brain is the suspected location of injury?

A. Frontal  
B. Temporal  
C. Parietal  
D. Occipital

28. When viewing magnetic resonance imaging (MRI) of the cervical spine, which tissue type is dark on a T1-weighted image and bright on a T2-weighted image?

A. Interspinal ligaments  
B. Facet joints  
C. Spinal cord  
D. Nucleus pulposus

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
29. Which finding correlates with a high risk of ischemic ulceration?

A. Ankle/brachial ratio of 0.40
B. Transcutaneous oxygen (TcPO₂) of 50 mm Hg
C. Serum albumin 3.2 gm/dl
D. Stenotic lesion of the superficial femoral artery

30. Which anticonvulsant medication is most likely to cause bone marrow suppression?

A. Carbamazepine
B. Gabapentin
C. Lamotrigine
D. Valproic acid

31. Which transverse deficiency represents the most common upper extremity congenital limb loss?

A. Transhumeral
B. Elbow disarticulation
C. Transradial
D. Wrist disarticulation

32. Neurochemical changes following a traumatic brain injury (TBI) may contribute to secondary brain injury by the mechanism of increased

A. free-radical production
B. extracellular concentrations of magnesium
C. extracellular concentrations of calcium
D. influx of potassium

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
33. What is the anatomic location of a stroke which produces impaired expression, comprehension, and repetition, with normal fluency?

A. Precentral gyrus  
B. Temporal gyrus  
C. Arcuate fasciculus  
D. Cingulate gyrus

34. Which corticosteroid has the longest duration of anti-inflammatory activity?

A. Betamethasone  
B. Methylprednisolone  
C. Triamcinolone  
D. Hydrocortisone

35. An elderly patient with advanced spondylosis on plain spine radiographs presents with radicular pain. Which diagnostic study is most likely to confirm neurologic dysfunction?

A. Computed tomography  
B. Electrodiagnostic testing  
C. Magnetic resonance imaging  
D. Myelography

36. Which fibers transmit poorly localized, dull, visceral pain to the spinal cord?

A. Myelinated A-alpha  
B. Myelinated A-delta  
C. Unmyelinated gamma  
D. Unmyelinated C
37. Which equipment modification is suitable for a tennis player with lateral epicondylitis?

A. Larger racquet head  
B. Larger handle diameter  
C. Increased string tension  
D. Stiffer racquet

38. Which cardiopulmonary parameter should improve in a patient with congestive heart failure who is participating in a cardiac rehabilitation program?

A. VO$_2$ max  
B. Systolic ejection fraction  
C. Diastolic ventricular filling  
D. Pulmonary blood flow

39. A patient diagnosed with a lateral medullary stroke exhibits ipsilateral loss of pain/temperature sensation of the face. Where is the corresponding neuroanatomic site?

A. Descending sympathetic tract  
B. Vestibular nuclei  
C. Spinal tract of the trigeminal nerve  
D. Spinothalamic tract

40. In nondisabled subjects walking at self-selected normal speeds, the normal distribution of time spent in double support is approximately

A. 10%  
B. 20%  
C. 30%  
D. 40%
41. For a patient with dysphagia following stroke, the chin-tuck maneuver is effective because it decreases

A. pharyngeal peristalsis
B. esophageal sphincter excursion
C. pharyngeal pressure
D. airway opening

42. Which modality most effectively treats the periarticular tissue of the hip joint?

A. Hot packs
B. Shortwave diathermy
C. Ultrasound
D. Electrical stimulation

43. Chronic compartment syndrome can be confirmed with which test?

A. Plethysmography
B. Ultrasound
C. Slit catheter
D. Magnetic resonance imaging

44. What is the most common cause of death in patients with ventilator-dependent tetraplegia who have survived the first 24 hours?

A. Renal failure
B. Pneumonia
C. Pressure ulcer infection
D. Pulmonary embolism
45. Nerve conduction findings in patients with critical illness polyneuropathy include

A. conduction block  
B. reduced sensory and motor evoked amplitudes  
C. temporal dispersion  
D. significant decrement to repetitive stimulation

46. What is the initial treatment plan for pain in a patient with acute spinal pain from bony metastasis?

A. Methadone  
B. Oxycodone  
C. Ibuprofen  
D. Gabapentin

47. A patient presents with complaints of numbness in the ring and little fingers with intrinsic hand weakness. Results from an ulnar motor nerve conduction study (NCS) with short segment incremental study (inching) is shown in this nerve conduction image. The findings are most consistent with a

A. temporal dispersion  
B. conduction block  
C. decrement  
D. normal study

48. Physical therapy treatment for patients with Parkinson disease includes

A. teaching the individual to turn en bloc  
B. training the individual not to focus on foot position  
C. shortening step length to prevent freezing  
D. using verbal and visual cueing

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
49. A man with chronic tetraplegia, ASIA Impairment Scale A, manages his bladder with an indwelling catheter. This cystogram reveals

A. nephrolithiasis
B. ureteral atony
C. vesicoureteral reflux
D. detrusor hyperreflexia

50. A person who had a lacunar infarct in the posterior limb of the internal capsule would most likely present with

A. dysarthria-clumsy hand syndrome
B. ataxic hemiparesis
C. pure sensory stroke
D. pure motor stroke

51. Which clinical feature is most likely seen in acute inflammatory demyelinating polyradiculopathy (Guillain-Barré syndrome)?

A. Areflexia
B. Asymmetric weakness of at least two extremities
C. Mild sensory loss
D. Autonomic dysfunction

52. In a child with Duchenne muscular dystrophy (DMD), which muscle group has the most significant weakness at the time of presentation?

A. Proximal upper extremities
B. Proximal lower extremities
C. Distal upper extremities
D. Distal lower extremities

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
53. In a 45-year-old man with a spinal cord injury (SCI) and a history of coronary heart disease, which risk factor is an indication for the most stringent control of low-density lipoprotein (LDL)?

A. Hypertension  
B. Diabetes  
C. Low high-density lipoprotein level  
D. Family history of coronary heart disease

54. Assuming the use of prostheses, which lower extremity amputation requires the greatest energy expenditure for ambulation?

A. Bilateral above knee  
B. Hemipelvectomy  
C. Unilateral hip disarticulation  
D. Below knee plus above knee

55. A patient with a burn has undergone lower extremity grafting and immediate postoperative fitting with an edema control dressing. The earliest time for safe ambulation is how many days after the operation?

A. 1  
B. 5  
C. 10  
D. 15

56. What is an advantage of intermittent positive pressure breathing (IPPB) devices for patients with postpolio syndrome?

A. Cosmetic appeal  
B. Portability  
C. Low cost  
D. Minimal noise

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
57. What is the most appropriate prescription for a patient with progressive communication deficits due to flaccid dysarthria secondary to amyotrophic lateral sclerosis (ALS)?

A. Articulation training  
B. Speech exercises emphasizing optimum performance  
C. Adaptive speech strategies such as slow speaking rate  
D. Computer-based augmentative communication system

58. What is the most important factor to consider when injecting myofascial trigger points?

A. Type of medication injected  
B. Localization of trigger points  
C. Frequency of injection  
D. Size of needle

59. What property of nonselective nonsteroidal anti-inflammatory drugs (NSAIDs) is most likely to cause an acute adverse event when used to treat a patient with a severe quadriceps contusion?

A. Analgesic  
B. Antiplatelet  
C. Antipyretic  
D. Anti-inflammatory

60. In patients with a spinal cord injury (SCI), which type of pain is most responsive to transcutaneous electrical nerve stimulation (TENS)?

A. Deafferentation central  
B. Radicular  
C. Complex regional pain syndrome  
D. Visceral

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
61. When using an anesthetic for local infiltration prior to shoulder injection, which compound has the longest duration of analgesia?

A. Lidocaine  
B. Mepivacaine  
C. Bupivacaine  
D. Prilocaine

62. What is the best orthotic management for an acute knee grade 2 medial collateral ligament sprain?

A. Swedish  
B. Unloading  
C. Immobilizer  
D. Functional

63. According to the American Spinal Injury Association (ASIA) International Standards for Neurological Classification of Spinal Cord Injury, testing of a key muscle should begin in which grade position?

A. 1  
B. 2  
C. 3  
D. 4

64. What are the sensitivity and specificity of D-dimer as a screening test for occult deep venous thrombosis (DVT) following traumatic brain injury (TBI)?

<table>
<thead>
<tr>
<th>Sensitivity</th>
<th>Specificity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Good</td>
<td>Good</td>
</tr>
<tr>
<td>Good</td>
<td>Poor</td>
</tr>
<tr>
<td>Poor</td>
<td>Good</td>
</tr>
<tr>
<td>Poor</td>
<td>Poor</td>
</tr>
</tbody>
</table>

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
65. When being used as an antispasmodic medication for spinal cord injury (SCI), what is the primary receptor site for diazepam?

A. GABA A receptors  
B. GABA B receptors  
C. Alpha 1 receptors  
D. Alpha 2 receptors

66. When a patient with cancer is returning home with hospice care, what is the most likely goal of inpatient rehabilitation?

A. Transfer training  
B. Endurance training  
C. Caregiver training  
D. Contracture management

67. Pharmacologic strategies employed to improve arousal for patients in a minimally conscious/vegetative state after severe traumatic brain injury (TBI) would most likely include stimulation of

A. glutamate receptors  
B. gamma-aminobutyric acid inhibition pathways  
C. serotonergic pathways  
D. dopaminergic pathways

68. A 28-year-old woman presents with distal weakness, dysarthria, and dysphagia with facial weakness. Physical examination reveals normal sensation, areflexia, and diffuse weakness. What is the earliest electrodiagnostic finding expected in this patient?

A. Prolonged distal onset motor latencies  
B. Absent sural sensory response  
C. Abnormal late responses  
D. Low-amplitude compound muscle action potential

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
69. When using a spinal cord stimulator for the management of neuropathic pain, electrodes are placed into which space?

A. Epidural  
B. Subarachnoid  
C. Interdiskal  
D. Subdural

70. The following tracing represents

A. myokymia  
B. myotonia  
C. complex repetitive discharge  
D. endplate potentials

71. When providing patient education to a 23-year-old woman with a complete T4 spinal cord injury (SCI), you should tell her that she will be unable to experience

A. orgasm  
B. sexual arousal  
C. psychogenic vaginal lubrication  
D. pregnancy

72. Which assessment tool can be used to evaluate functional limitations in patients with myofascial pain?

A. McGill Pain Questionnaire  
B. Numeric rating scale  
C. Sickness Impact Profile  
D. Minnesota Multiphasic Personality Inventory

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
73. Which therapeutic modality combines a biologically active substance with a coupling medium and uses ultrasound to force the active material into tissue?

A. Diathermy
B. Iontophoresis
C. Phonophoresis
D. Fluidotherapy

74. A 35-year-old man who sustained a severe traumatic brain injury (TBI) 48 hours ago has now developed new tachycardia, hypertension, agitation, and hallucinations. What is the most likely diagnosis?

A. Posttraumatic agitation
B. Dysautonomia
C. Hyponatremia
D. Alcohol withdrawal

75. A middle-aged man who fell on his outstretched arm has pain in his shoulder and is unable to initiate abduction of the arm. Examination reveals weakness of shoulder abduction and external rotation and tenderness under the acromion. What is the most likely diagnosis?

A. Partial C5 root avulsion
B. Clavicular fracture
C. Rotator cuff tear
D. Suprascapular nerve injury

76. Which recreational activity is contraindicated following a total knee arthroplasty?

A. Hiking
B. Power walking
C. Jogging
D. Cycling

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
77. Which class of antidepressant medication has a narrow therapeutic index and is associated with fatal heart block or ventricular arrhythmias at toxic doses?

A. Selective serotonin reuptake inhibitors
B. Serotonin-norepinephrine reuptake inhibitors
C. Tricyclic antidepressants
D. Monoamine oxidase inhibitors

78. A patient on methadone presented with euphoria, agitation, and pupillary constriction. He subsequently had progressive drowsiness leading into a coma. He most likely has opioid-related

A. allergic reaction
B. psychotic disorder
C. withdrawal
D. intoxication

79. The decision to discontinue antiepileptic drug therapy in a patient with a history of epilepsy is appropriate when the patient has been seizure-free for at least how many months?

A. 6
B. 12
C. 18
D. 24

80. A patient who sustained a stroke presents with spasticity in the wrist flexors which has been treated with botulinum toxin. Which modality will be most effective when applied to the wrist extensors?

A. Massage
B. Ultrasound
C. Muscle cooling
D. Electrical stimulation
81. A patient with a recent traumatic brain injury (TBI) developed right lower extremity spasticity and knee flexion contracture which has been treated unsuccessfully with range of motion (ROM) and positioning. What is the next step in the management of this patient?

A. Additional ROM  
B. Serial casting  
C. Electrical stimulation  
D. Surgical tendon lengthening

82. A 29-year-old dancer presents with pain that originates on the sole of her foot. She is tender to palpation along the anterior calcaneus and medial arch. What is the most likely diagnosis?

A. Calcaneal bursitis  
B. Tibiotalar impingement  
C. Lisfranc joint subluxation  
D. Plantar fasciitis

83. The test in this video is useful for diagnosing

A. a syndesmosis injury  
B. anterior compartment syndrome  
C. an Achilles tendon rupture  
D. a peroneal tendon dislocation

A video file accompanies this item. On the computer-based exam, a video would be automatically displayed here. Please visit https://vimeo.com/131888181 to view the video.

84. A 77-year-old man who sustained a stroke with right hemiplegia and marked receptive aphasia three months ago is being evaluated for electromyographic and force biofeedback after developing improvements in voluntary motor control. You advise against this therapy because of his

A. age  
B. aphasia  
C. duration of stroke  
D. shoulder subluxation

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
85. What is the preferred treatment for a patient with acute complex regional pain syndrome (CRPS) type I with edema?

A. Topical dimethyl sulfoxide
B. Baclofen
C. Prednisone
D. Ibuprofen

86. After sustaining a stroke, a patient presents with restricted shoulder abduction. A diagnostic block of which nerve will be most helpful in distinguishing muscle overactivity from fixed contracture?

A. Spinal accessory
B. Musculocutaneous
C. Thoracodorsal
D. Dorsal scapular

87. In the nonoperative treatment of a proximal humerus fracture, when should shoulder passive range of motion (ROM) exercises begin?

A. Within one week
B. Within 2-3 weeks
C. Within 4-6 weeks
D. When fracture is healed

88. A patient with a lesion in the left inferior frontal gyrus would most likely have which type of aphasia?

A. Conduction
B. Anomic
C. Broca
D. Wernicke

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
89. In severe carpal tunnel syndrome, weakness and atrophy primarily involve the flexor pollicis brevis, abductor pollicis brevis, and

A. flexor pollicis longus  
B. adductor pollicis  
C. abductor pollicis longus  
D. opponens pollicis

90. Following a burn injury, transparent custom total contact face mask orthoses are used to

A. cover the disfigurement  
B. preserve facial contours  
C. increase eyelid eversion  
D. prevent infection

91. A patient with gangrene of the distal foot has the following segmental pressures.

<table>
<thead>
<tr>
<th>Segment</th>
<th>Pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ankle brachial index</td>
<td>.50</td>
</tr>
<tr>
<td>Lower calf brachial index</td>
<td>.60</td>
</tr>
<tr>
<td>Upper calf</td>
<td>.90</td>
</tr>
<tr>
<td>Lower thigh</td>
<td>1.00</td>
</tr>
<tr>
<td>Upper thigh</td>
<td>1.20</td>
</tr>
</tbody>
</table>

What level of amputation is recommended for optimal healing and ambulation?

A. Syme  
B. Below knee  
C. Above knee  
D. Hip disarticulation

92. What is the final activating force used in the muscle energy technique?

A. Patient muscle contraction  
B. Movement to the barrier  
C. Position hold by the practitioner  
D. Low-amplitude, high-velocity thrust

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
93. An individual with spina bifida presents with this lower extremity deformity.

What is the term for this abnormality?

A. Equinovarus
B. Equinovalgus
C. Calcaneovalgus
D. Vertical talus

94. Which nerve conduction finding would be expected in a C6 radiculopathy?

A. Abnormal ulnar compound motor action potential with pickup over the abductor digiti minimi
B. Abnormal median compound motor action potential with pickup over the abductor pollicis brevis
C. Normal median sensory nerve action potential
D. Abnormal radial sensory nerve action potential

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
95. A 70-year-old man with a history of type 2 diabetes mellitus, hypercholesterolemia treated with a cholesterol-lowering agent, and hypothyroidism presented with a two-week history of pain in the left lower extremity and difficulty climbing stairs. Diagnostic testing, including lumbosacral magnetic resonance imaging (MRI) and cerebrospinal fluid (CSF) analysis, was unremarkable. Electrodiagnostic testing results are shown below.

<table>
<thead>
<tr>
<th>Location</th>
<th>Nerve Latency (ms)</th>
<th>Amplitude</th>
<th>Conduction Velocity (m/s)</th>
<th>F Wave (ms)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left sural</td>
<td>4.2</td>
<td>4 µV</td>
<td>45</td>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Right femoral to rectus femoris</td>
<td>1 mV</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Needle exam showed positive waves and fibrillations with decreased recruitment in the left rectus femoris, tensor fascia lata, and iliopsoas muscles. Other upper and lower extremity muscles were normal. What is the most likely diagnosis?

A. Amyotrophic lateral sclerosis
B. Acute inflammatory demyelinating polyneuropathy
C. Inflammatory myopathy
D. Diabetic amyotrophy

96. In a patient who sustained a thalamic stroke, how are pain and temperature perception affected below the level of the lesion?

<table>

</tbody>
</table>

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
97. What is the most commonly used switch access method for alternative and augmentative communication devices?

A. Picture text scanning  
B. Noun verb scanning  
C. Row column scanning  
D. Line checkbox scanning

98. When combined with active range of motion (ROM) exercise, which modality can improve hand function in individuals with scleroderma (systemic sclerosis) or rheumatoid arthritis (RA)?

A. Transcutaneous electrical nerve stimulation  
B. Therapeutic ultrasound  
C. Cryotherapy  
D. Paraffin baths

99. A patient presents with progressive, unrelenting low back pain. Two months ago, an uncomplicated diskectomy successfully relieved the patient’s radicular symptoms. Which imaging study would most likely confirm the diagnosis at this time?

A. X-ray of lumbosacral spine  
B. Magnetic resonance imaging with contrast  
C. Ultrasound  
D. Three-phase bone scan

100. In order to differentiate a lesion of the common peroneal (fibular) nerve from the deep peroneal (fibular) nerve at the fibular head, which muscle should be tested with needle electromyography?

A. Long head of the biceps femoris  
B. Short head of the biceps femoris  
C. Peroneus (fibularis) longus  
D. Tibialis anterior

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
1. CORRECT ANSWER: B
Class 1 code: B1e | Class 2 code: A2

2. CORRECT ANSWER: C
Class 1 code: A3 | Class 2 code: A2

3. CORRECT ANSWER: D
Class 1 code: C2 | Class 2 code: A3b

4. CORRECT ANSWER: D
Class 1 code: E1b | Class 2 code: C2d

5. CORRECT ANSWER: B
Class 1 code: F | Class 2 code: B4

6. CORRECT ANSWER: D
Class 1 code: F | Class 2 code: B4

7. CORRECT ANSWER: C
Class 1 code: E1g | Class 2 code: A3b

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
8. CORRECT ANSWER: A  
   Class 1 code: B2b  |  Class 2 code: A3e  

9. CORRECT ANSWER: C  
   Class 1 code: F  |  Class 2 code: B4  

10. CORRECT ANSWER: D  
    Class 1 code: D5  |  Class 2 code: A2  

11. CORRECT ANSWER: A  
    Class 1 code: B2l  |  Class 2 code: C1  

12. CORRECT ANSWER: A  
    Class 1 code: B1b  |  Class 2 code: C3b  

13. CORRECT ANSWER: B  
    Class 1 code: B2h  |  Class 2 code: A2  

14. CORRECT ANSWER: A  
    Class 1 code: B2f  |  Class 2 code: C3e  

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
15. CORRECT ANSWER: C  
Class 1 code: B2j | Class 2 code: C3b  

16. CORRECT ANSWER: C  
Class 1 code: F | Class 2 code: E2c  

17. CORRECT ANSWER: A  
Class 1 code: B2j | Class 2 code: A2  

18. CORRECT ANSWER: D  
Class 1 code: B1b | Class 2 code: A3e  

19. CORRECT ANSWER: C  
Class 1 code: D3e | Class 2 code: C4f  

20. CORRECT ANSWER: A  
Class 1 code: B1b | Class 2 code: D3g  

21. CORRECT ANSWER: A  
Class 1 code: B2a | Class 2 code: E4  

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
22. CORRECT ANSWER: A
   Class 1 code: F | Class 2 code: B4

23. CORRECT ANSWER: B
   Class 1 code: A1 | Class 2 code: E6

24. CORRECT ANSWER: B
   Class 1 code: A5o | Class 2 code: B5

25. CORRECT ANSWER: D
   Class 1 code: B2j | Class 2 code: C1

26. CORRECT ANSWER: B
   Class 1 code: F | Class 2 code: B3

27. CORRECT ANSWER: A
   Class 1 code: A3 | Class 2 code: E1a

28. CORRECT ANSWER: D
   Class 1 code: F | Class 2 code: A3e

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
29. CORRECT ANSWER: A
   Class 1 code: C2 | Class 2 code: A3a

30. CORRECT ANSWER: A
   Class 1 code: E1d | Class 2 code: C4b

31. CORRECT ANSWER: C
   Class 1 code: C1 | Class 2 code: E6

32. CORRECT ANSWER: A
   Class 1 code: A3 | Class 2 code: E3a

33. CORRECT ANSWER: B
   Class 1 code: E2a | Class 2 code: E1a

34. CORRECT ANSWER: A
   Class 1 code: B2j | Class 2 code: C4e

35. CORRECT ANSWER: B
   Class 1 code: B2h | Class 2 code: C1

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
36. CORRECT ANSWER: D
Class 1 code: E4 | Class 2 code: E3a

37. CORRECT ANSWER: B
Class 1 code: B2b | Class 2 code: D3g

38. CORRECT ANSWER: A
Class 1 code: D1a | Class 2 code: E3c

39. CORRECT ANSWER: C
Class 1 code: A1 | Class 2 code: E1a

40. CORRECT ANSWER: B
Class 1 code: F | Class 2 code: A3b

41. CORRECT ANSWER: D
Class 1 code: E1h | Class 2 code: E3f

42. CORRECT ANSWER: C
Class 1 code: B2k | Class 2 code: C2d

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
43. CORRECT ANSWER: C
Class 1 code: B21 | Class 2 code: A3g

44. CORRECT ANSWER: B
Class 1 code: A2 | Class 2 code: A5

45. CORRECT ANSWER: B
Class 1 code: A4b | Class 2 code: B3

46. CORRECT ANSWER: C
Class 1 code: D4 | Class 2 code: C4a

47. CORRECT ANSWER: B
Class 1 code: A4a | Class 2 code: B3

48. CORRECT ANSWER: D
Class 1 code: A5n | Class 2 code: C3a

49. CORRECT ANSWER: C
Class 1 code: D3a | Class 2 code: A3c

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
50. CORRECT ANSWER: D
   Class 1 code: A1 | Class 2 code: A1

51. CORRECT ANSWER: A
   Class 1 code: A5d | Class 2 code: A2

52. CORRECT ANSWER: B
   Class 1 code: A5g | Class 2 code: B4

53. CORRECT ANSWER: B
   Class 1 code: D6 | Class 2 code: E6

54. CORRECT ANSWER: A
   Class 1 code: C2 | Class 2 code: D1

55. CORRECT ANSWER: A
   Class 1 code: B2e | Class 2 code: C1

56. CORRECT ANSWER: B
   Class 1 code: A5c | Class 2 code: D3e

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document. These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
57. CORRECT ANSWER: D
   Class 1 code: A5b | Class 2 code: D3d

58. CORRECT ANSWER: B
   Class 1 code: B2d | Class 2 code: C5d

59. CORRECT ANSWER: B
   Class 1 code: B2a | Class 2 code: C4e

60. CORRECT ANSWER: B
   Class 1 code: A2 | Class 2 code: D3c

61. CORRECT ANSWER: C
   Class 1 code: F | Class 2 code: E9

62. CORRECT ANSWER: C
   Class 1 code: B2i | Class 2 code: D2

63. CORRECT ANSWER: C
   Class 1 code: A2 | Class 2 code: A4
64. CORRECT ANSWER: B
   Class 1 code: D1d | Class 2 code: A3d

65. CORRECT ANSWER: A
   Class 1 code: A2 | Class 2 code: E9

66. CORRECT ANSWER: C
   Class 1 code: D4 | Class 2 code: C6d

67. CORRECT ANSWER: D
   Class 1 code: E3d | Class 2 code: E9

68. CORRECT ANSWER: C
   Class 1 code: A5d | Class 2 code: B6

69. CORRECT ANSWER: A
   Class 1 code: E4 | Class 2 code: C5d

70. CORRECT ANSWER: C
   Class 1 code: A5l | Class 2 code: B4

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
71. CORRECT ANSWER: C
   Class 1 code: A2  |  Class 2 code: E3a

72. CORRECT ANSWER: C
   Class 1 code: B2d  |  Class 2 code: A4

73. CORRECT ANSWER: C
   Class 1 code: F  |  Class 2 code: C2d

74. CORRECT ANSWER: D
   Class 1 code: A3  |  Class 2 code: A2

75. CORRECT ANSWER: C
   Class 1 code: B2a  |  Class 2 code: A1

76. CORRECT ANSWER: C
   Class 1 code: B1b  |  Class 2 code: C1

77. CORRECT ANSWER: C
   Class 1 code: E3a  |  Class 2 code: C4d

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
78. CORRECT ANSWER: D
   Class 1 code: E3b | Class 2 code: A2

79. CORRECT ANSWER: D
   Class 1 code: E1d | Class 2 code: C1

80. CORRECT ANSWER: D
   Class 1 code: E1a | Class 2 code: D3b

81. CORRECT ANSWER: B
   Class 1 code: E1a | Class 2 code: C3e

82. CORRECT ANSWER: D
   Class 1 code: B2j | Class 2 code: A2

83. CORRECT ANSWER: A
   Class 1 code: B2a | Class 2 code: A2

84. CORRECT ANSWER: B
   Class 1 code: A1 | Class 2 code: C6e

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
85. CORRECT ANSWER: C
   Class 1 code: B2c | Class 2 code: C4e

86. CORRECT ANSWER: C
   Class 1 code: A1 | Class 2 code: E1b

87. CORRECT ANSWER: A
   Class 1 code: B2f | Class 2 code: C3b

88. CORRECT ANSWER: C
   Class 1 code: E2a | Class 2 code: A2

89. CORRECT ANSWER: D
   Class 1 code: A4c | Class 2 code: A1

90. CORRECT ANSWER: B
   Class 1 code: B2e | Class 2 code: D2

91. CORRECT ANSWER: B
   Class 1 code: C2 | Class 2 code: C1

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.
92. CORRECT ANSWER: A
   Class 1 code: B2d | Class 2 code: C3d

93. CORRECT ANSWER: C
   Class 1 code: A5f | Class 2 code: A1

94. CORRECT ANSWER: C
   Class 1 code: A5m | Class 2 code: B3

95. CORRECT ANSWER: D
   Class 1 code: A4b | Class 2 code: B1

96. CORRECT ANSWER: B
   Class 1 code: A1 | Class 2 code: A1

97. CORRECT ANSWER: C
   Class 1 code: E2a | Class 2 code: D3d

98. CORRECT ANSWER: D
   Class 1 code: B1c | Class 2 code: C2a
99. **CORRECT ANSWER: B**
   
   Class 1 code: **B2h**  |  Class 2 code: **A3e**  

100. **CORRECT ANSWER: C**

   Class 1 code: **A4a**  |  Class 2 code: **B4**  

*Class codes refer to question classification on the ABPMR Part I Certification Examination Outline, which is included at the back of this document.

These questions are provided by the ABPMR for study purposes only. These are actual board exam questions, but they have been permanently removed from examination item banks and will no longer be used on any ABPMR examinations. With the exception of these questions, the ABPMR does not share board exam questions with anyone.

Part I Certification Examination Outline, page 2

Class 2: Focus of Question / Patient Management

A. Patient Evaluation & Diagnosis (31%)
   1. Physical Exam, Signs & Symptoms
   2. Diagnosis & Etiology
   3. Diagnostic Procedures
      a) Cardiopulmonary Assess/Stress Test
      b) Gait Analysis
      c) Urodynamics
      d) Lab Studies
      e) Medical Imaging
      f) Neuropsychological Evaluation
      g) Other Diagnostic Procedures
   4. Functional Evaluation
   5. Prognosis (Incl. Outcome Measures)

B. Electrodiagnosis (15%)
   1. General Electrodiagnosis
   2. Instrumentation
   3. Nerve Conduction
   4. Electromyography
   5. Neuromuscular Transmission
   6. H Reflex/F Wave
   7. Special Studies

C. Patient Management (32%)
   1. Clinical Decision Making (Incl. Ethics)
   2. Physical Agents
      a) Heat/Cryotherapy
      b) Hydrotherapy
      c) Electrostimulation
      d) Ultrasound
   3. Therapeutic Exercise & Manipulation
      a) Motor Control
      b) Mobility and Range of Motion
      c) Strength and Endurance
      d) Manipulation and Massage
      e) Traction/Immobilization
   4. Pharmacologic Interventions
      a) Analgesics
      b) Antiseizure and Antispasmodics
      c) Antibiotics
      d) Psychopharmacologic
      e) Anti-inflammatory
      f) Other Medications
   5. Procedural/Interventional
      a) Nerve Blocks
      b) Anesthetic Injections
      c) Surgery
      d) Other Procedural/Interventional
   6. Behavioral/Psychological Modalities
      a) Relaxation Therapy
      b) Behavior Modification
      c) Psychotherapy/Counseling
      d) Education
      e) Biofeedback

D. Equipment & Assistive Technology (10%)
   1. Prosthetics
   2. Orthotics
   3. Other Rehabilitation Technology
      a) Shoes
      b) Functional Electrical Stimulation
      c) Transcutaneous Electrical Nerve Stimulation
      d) Augmentative Communication
      e) Ventilation
      f) Wheelchairs/Seating
      g) Other Devices

E. Applied Sciences (12%)
   1. Anatomy
      a) Central Nervous System
      b) Peripheral Nerves
      c) Head/Neck
      d) Shoulder
      e) Arm
      f) Wrist
      g) Hand
      h) Hip
      i) Knee
      j) Leg
   2. Physiology
      a) Neurophysiology
      b) Neuromuscular
      c) Cardiovascular
      d) Pulmonary
      e) Genitourinary
      f) Gastrointestinal
      g) Skin and Connective Tissue
      h) Bone and Joints
      i) Autonomic Nervous System
      j) Endocrine
   3. Pathology/Pathophysiology
      a) Neurophysiology
      b) Neuromuscular
      c) Cardiovascular
      d) Pulmonary
      e) Genitourinary
      f) Gastrointestinal
      g) Skin and Connective Tissue
      h) Bone and Joints
      i) Autonomic Nervous System
      j) Endocrine
   4. Kinesiology/Biomechanics
   5. Histology
   6. Epidemiology/Risk Factors
   7. Nutrition
   8. Biochemistry
   9. Pharmacology
  10. Research & Statistics
  11. Growth & Development
  12. Other Basic Science (eg, physics)
